

National Severe Weather Warning Service

Chief Forecasters Assessment

Rainfall totals are still somewhat uncertain, but many regions seem likely to see 30-60mm of rain, and in a few locations torrential downpours could bring in excess of 100mm. Cornwall, Pembrokeshire and Northern Ireland looks most vulnerable to flooding.

Gusts exceeding 50 mph may exacerbate any problems, by leading to leaves and other minor debris blocking drains.

The Met Office have issued a **Yellow Warning of Rain**

Valid from **05:00 on Mon, 24th Oct 2011** until **23:59 on Mon, 24th Oct 2011**

Periods of heavy rain, accompanied at times by strong winds, will affect parts of western Britain during Monday. The public should be aware that quantities of rain may be sufficient in a few places to disrupt travel and give rise to localised flooding.
